

A modern interior design scene featuring a round wooden table with a dark, textured base. On the table are a stack of books and a glass of yellow liquid. To the left is a dark, curved chair. In the background, there is a wooden cabinet with a wire basket and framed art. Three white, rounded pendant lights hang above the table. The floor is covered with a patterned rug. The right side of the image is partially obscured by a brown overlay containing text.

ABOUT ME

MYSELF KSHIRAJA PURSUED BACHELOR OF INTERIOR DESIGN COURSE AT SATHYABAMA UNIVERSITY, TAMIL NADU. I AM PASSIONATE ABOUT FUNCTIONAL AND AESTHETICALLY PLEASING SPACES. MY WAY OF APPROACH IS DRIVEN BY A BALANCE OF CREATIVITY, SUSTAINABILITY AND USER EXPERIENCE . I BELIEVE DESIGN IS GIVING A LIFE TO A SPACE THAT EVOKE EMOTIONS AND TELL STORIES. HENCE, MY GOAL IS TO EXPLORE MORE AND FURTHER EXPERIENCE IN INTERIOR DESIGN .

SOFT SKILLS

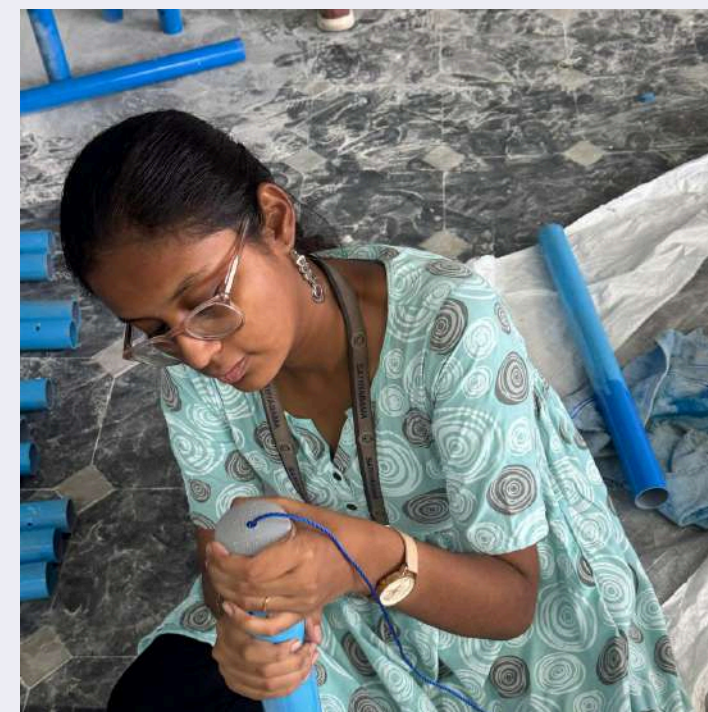

- CONCEPT DEVELOPMENT
- ATTENTION TO DETAIL
- CREATIVE THINKING
- GOOD COMMUNICATION
- PROBLEM SOLVING
- TIME MANAGEMENT

SOFTWARE SKILLS

- AUTOCAD
- SKETCHUP
- IN DESIGN
- ADOBE PHOTOSHOP
- V-RAY
- RHINO & GRASSHOPPER

PARAMETRIC FALSE CEILING

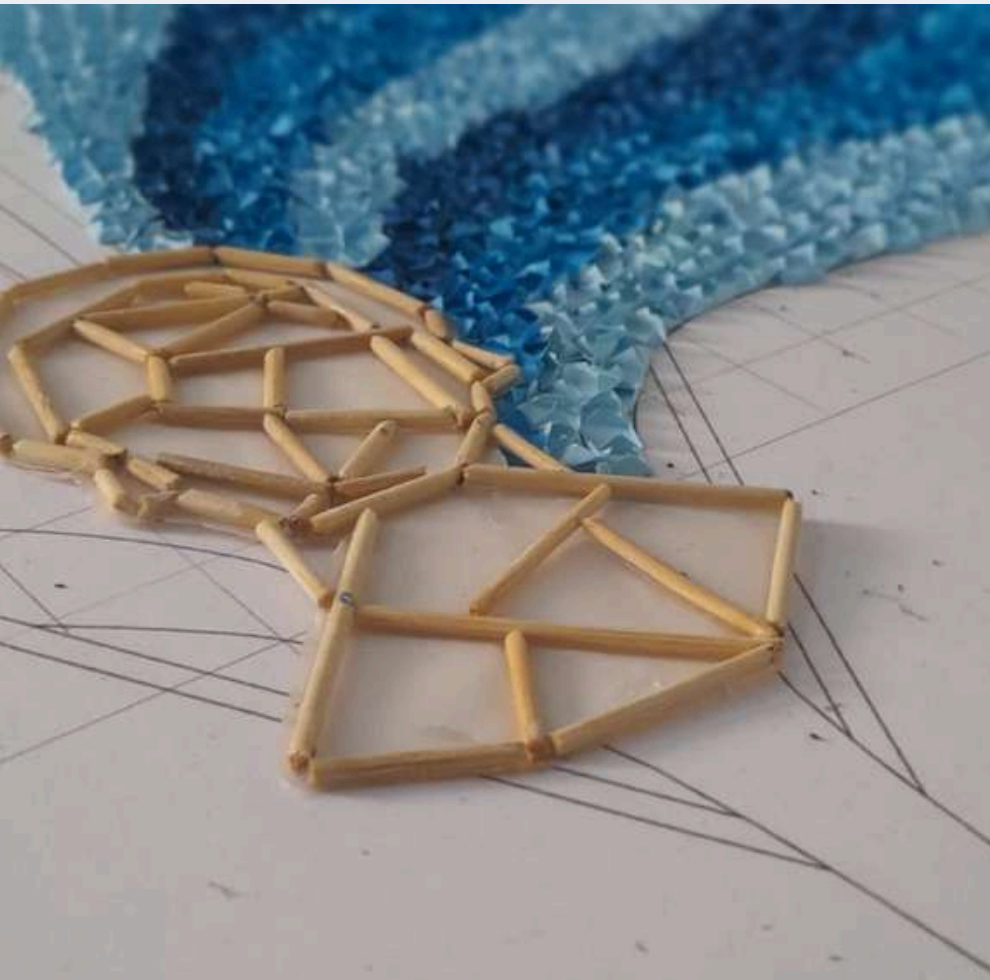

Work in progress

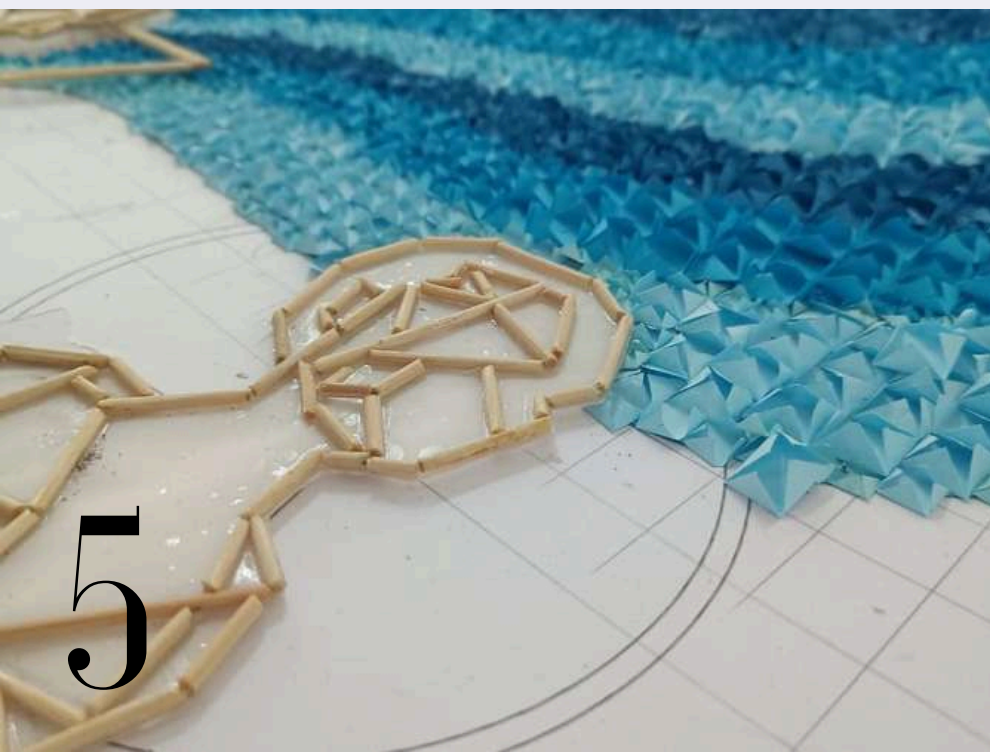

- A dynamic parametric ceiling design driven by patterns of light, ventilation, or spatial flow. The form was generated using algorithmic logic to create a visually striking and functional element that enhances spatial identity and acoustics.

- Developed the parametric model using [Rhino + Grasshopper / other tools]
- Produced 2D drawings and 3D renders
- Created fabrication-ready panel layouts and exploded views

MURAL INSTALATION

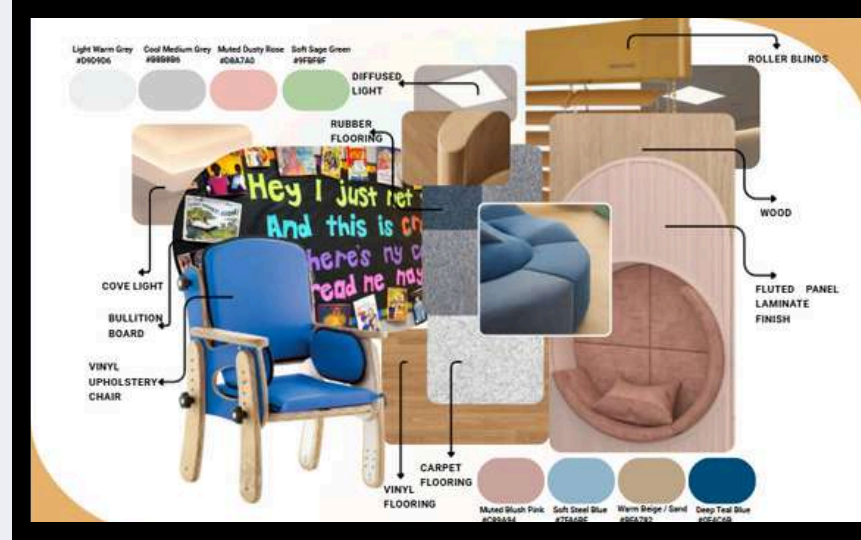

This mural explores the theme of identity and unity through geometric abstraction. Three wireframe portraits are placed within a square, triangle, and circle—representing structure, creativity, and wholeness. The backdrop, made of folded triangular modules in gradients of blue, creates a dynamic flow symbolizing energy and transformation.

AUTISM SCHOOL

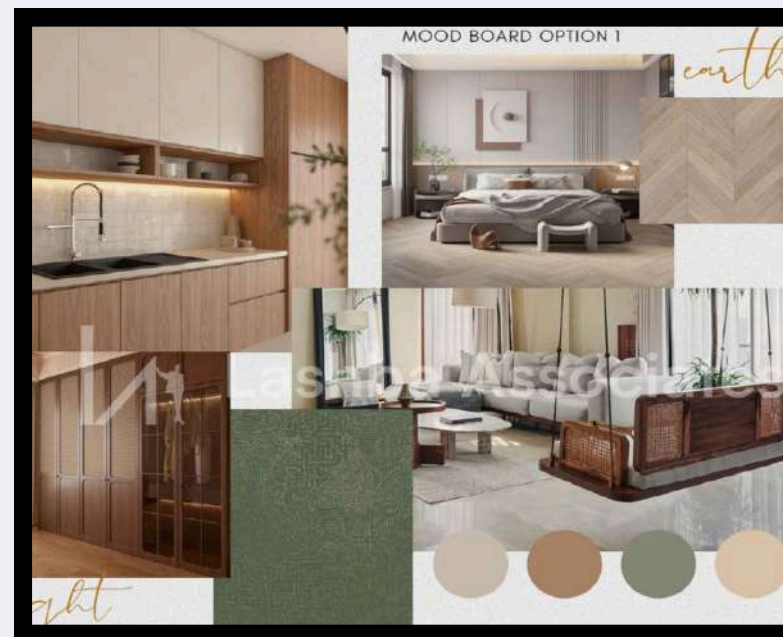

CAPSTONE PROJECT

- The Autism School is a specially designed educational and therapeutic space created to support children with Autism Spectrum Disorder (ASD).
- The main aim of the project is to provide a safe, structured, and sensory-friendly environment that helps children learn, communicate, and develop comfortably.
- The design focuses on reducing sensory overload by using calming colour palettes, natural lighting, acoustic treatments, and clear circulation paths to create a peaceful and easy-to-navigate atmosphere.

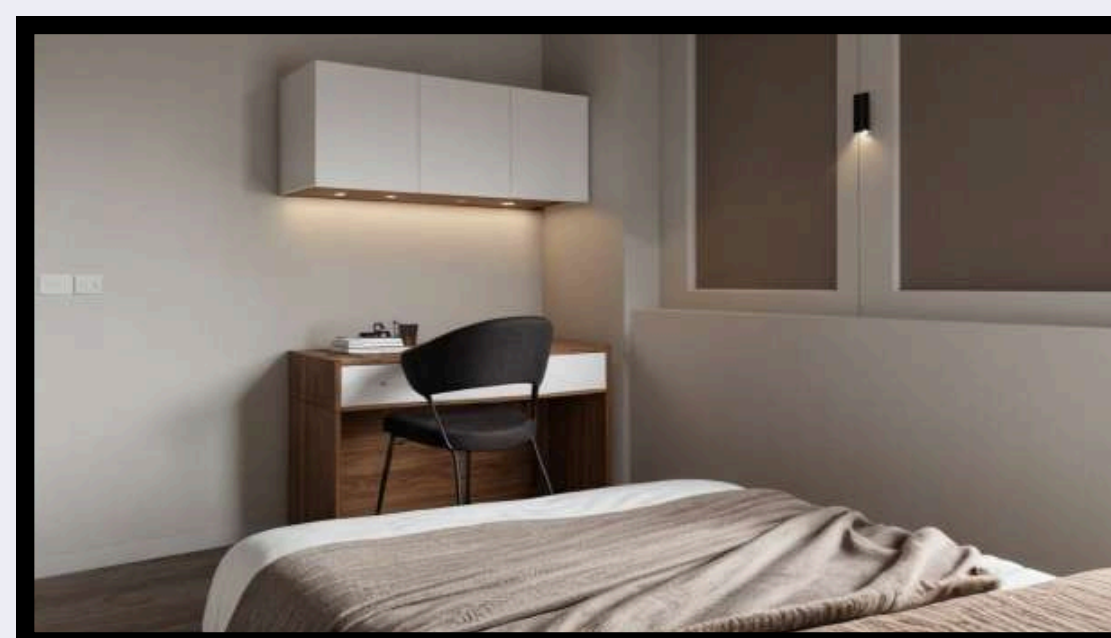

- The main challenge in designing the Autism School was creating a space that supports the sensory and emotional needs of autistic children. Many children with autism are sensitive to noise, bright lights, crowded spaces, and sudden changes in their environment, which can lead to stress and anxiety.
- I designed calm and organized spaces using soft colors, natural lighting, acoustic materials, and simple circulation paths. I also included sensory rooms and quiet zones to help students regulate their emotions when overwhelmed.
- Safety was ensured through clear layouts, rounded furniture edges, and non-slip flooring.
- The overall aim of the project was to create a comfortable, predictable, and inclusive learning environment that promotes independence, focus, and well-being for children with autism.

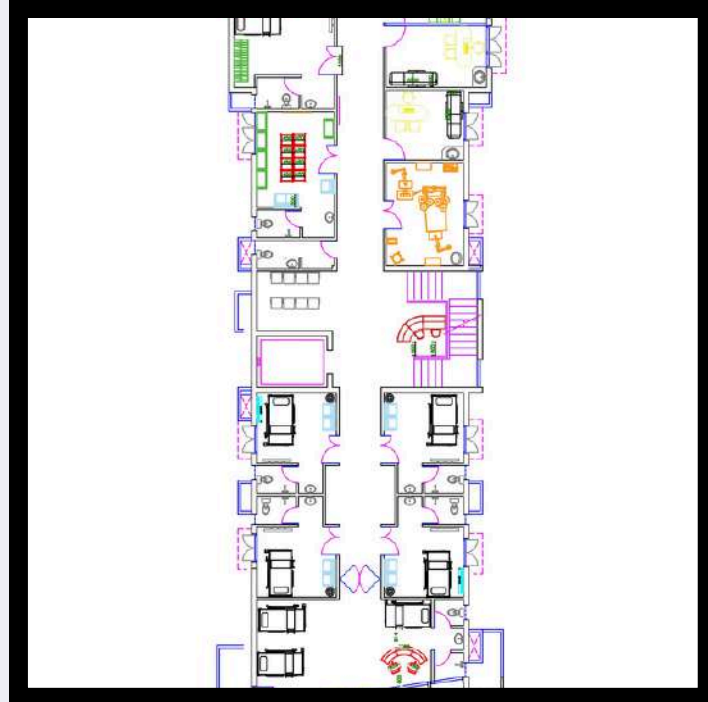

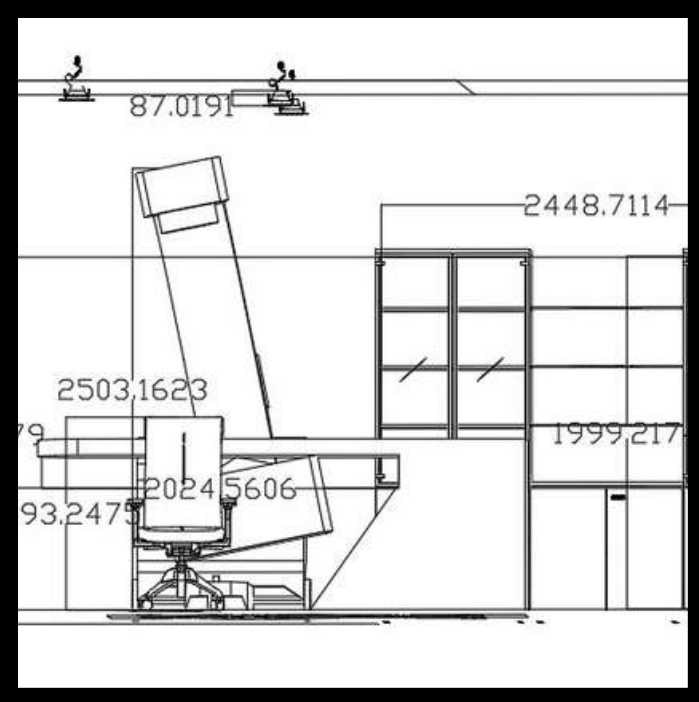

INTERNSHIP

APARTMENT

- During my internship, I worked on residential apartment projects where my primary responsibility was developing detailed interior drawings such as wardrobes, TV units, study units, kitchen details, pooja units, false ceiling details, and furniture layouts.
- One of the major challenges was balancing the client's aesthetic preferences with functional requirements and available space. In many apartments, space constraints required careful planning to maximize storage without making the rooms feel crowded.
- To solve this, I designed multifunctional furniture, optimized wardrobe layouts, and created customized storage solutions based on the users' needs.

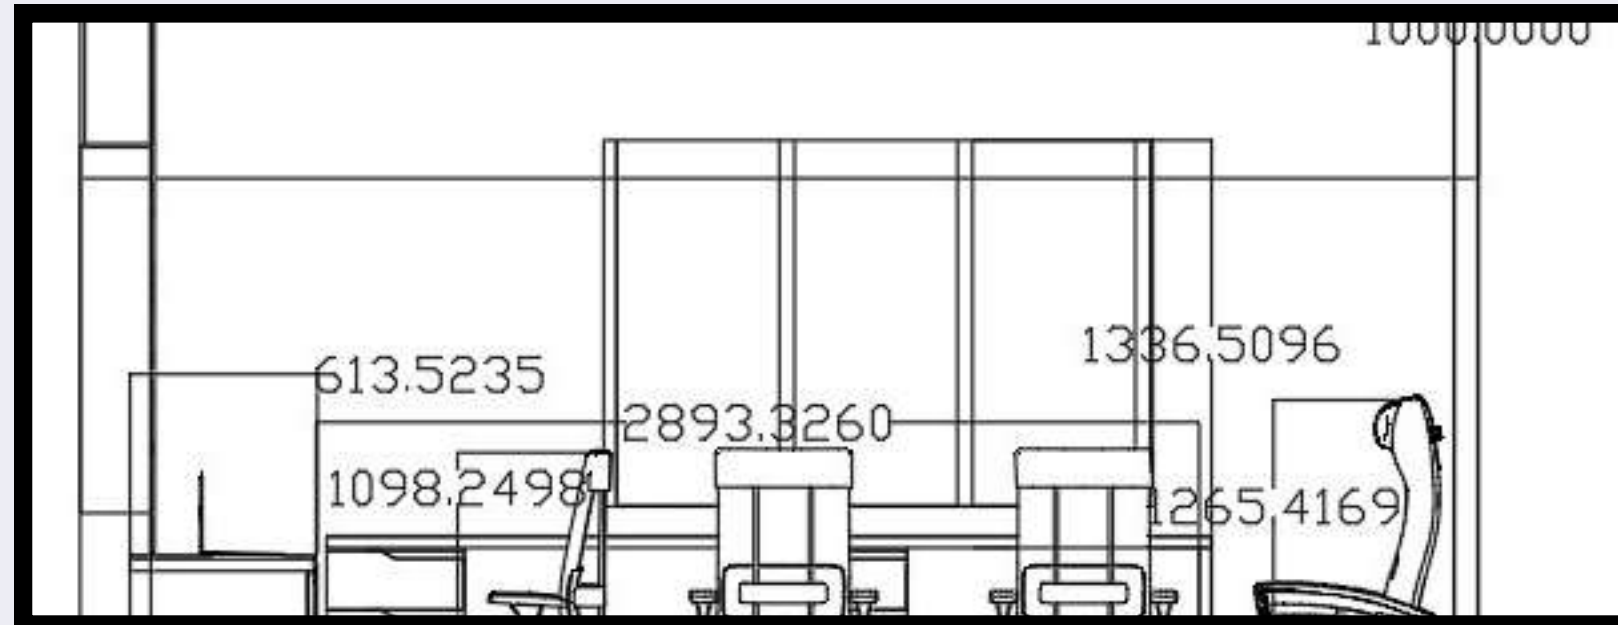

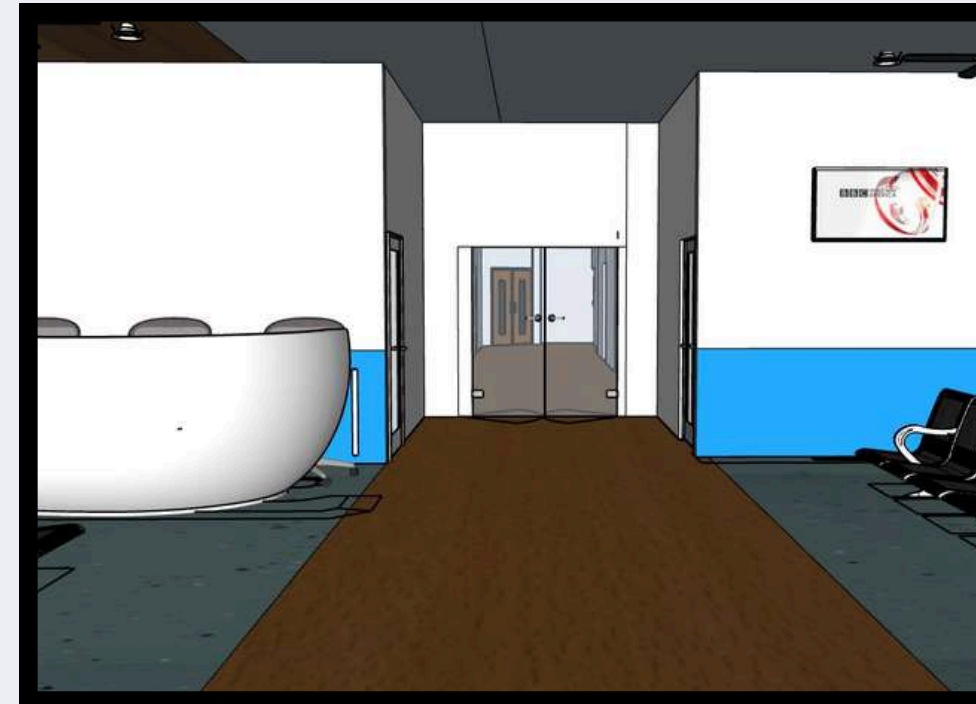

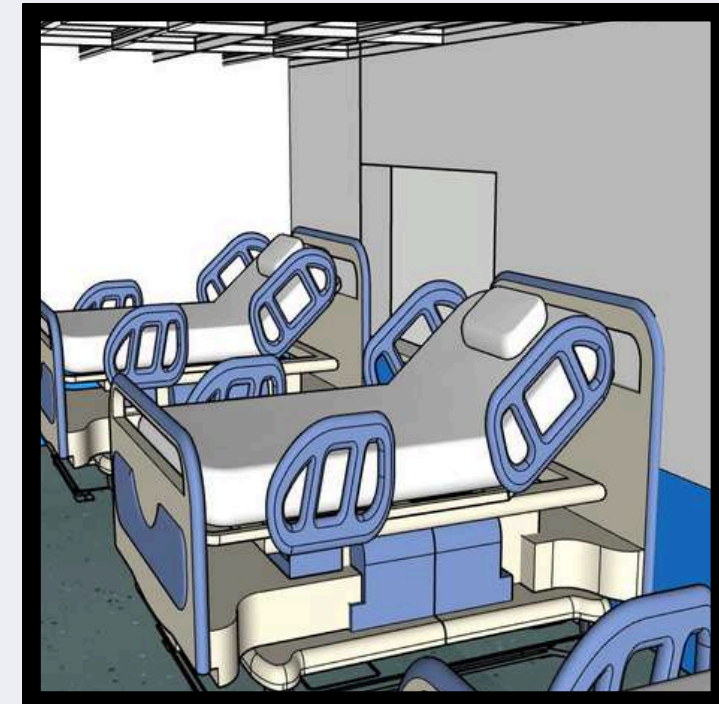

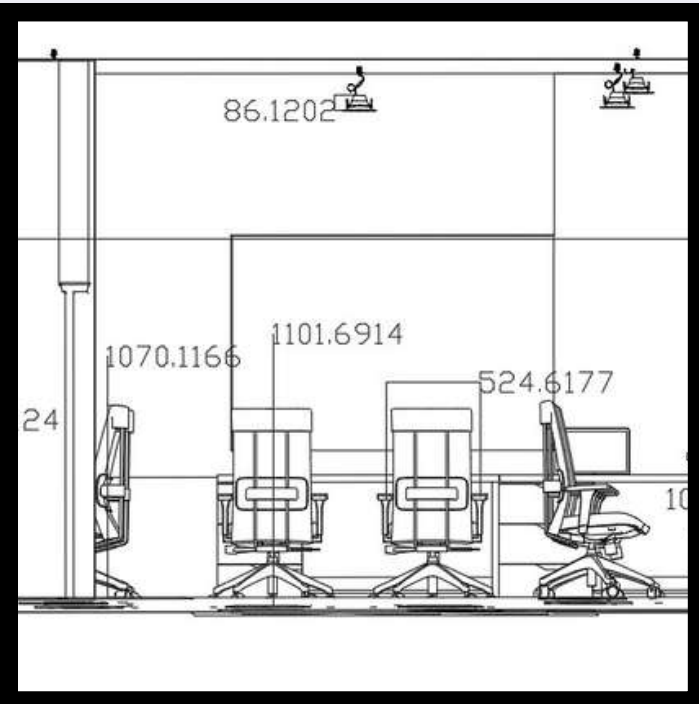

- one of the main challenges was preparing detailed working drawings that could be clearly understood by carpenters and site teams.
- Through this process, I improved my technical drafting skills and gained practical knowledge of joinery, materials, and construction methods. Site visits further helped me understand how design concepts and drawings are translated into real spaces, the importance of coordination between designers, clients, contractors, and workers.
- Overall, the experience strengthened my understanding of residential interior design, space planning, furniture detailing, and project execution.

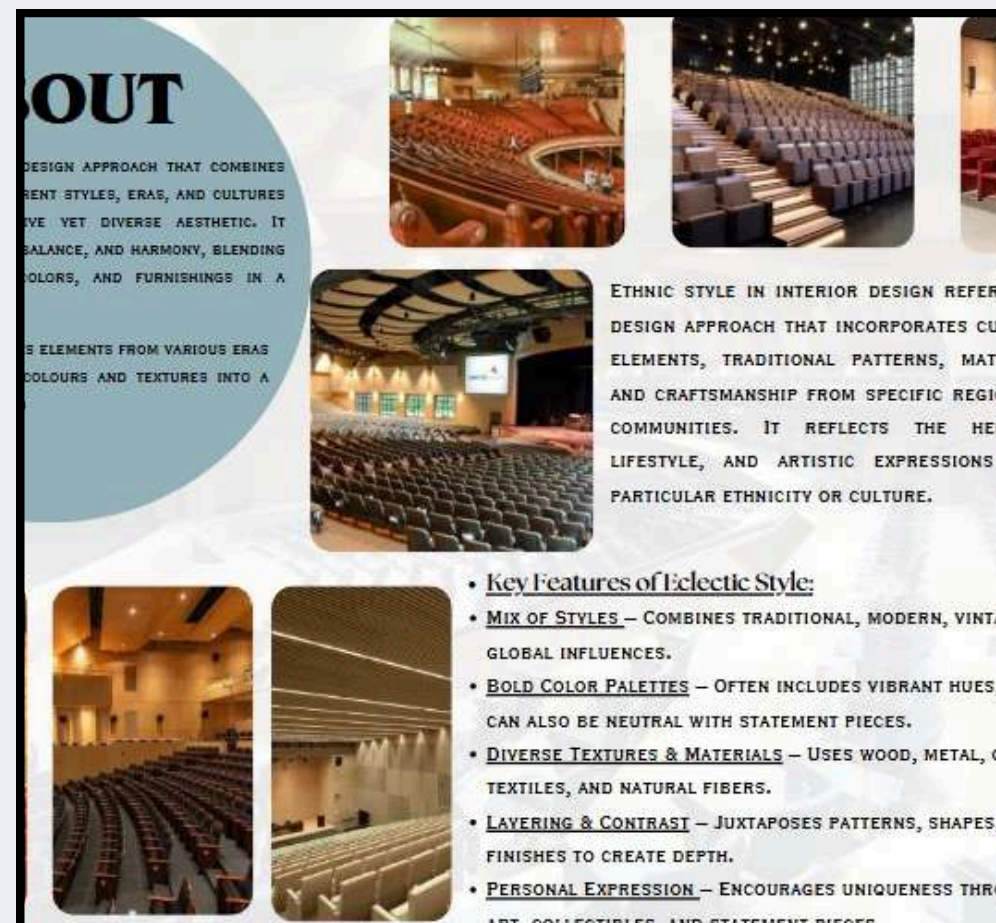

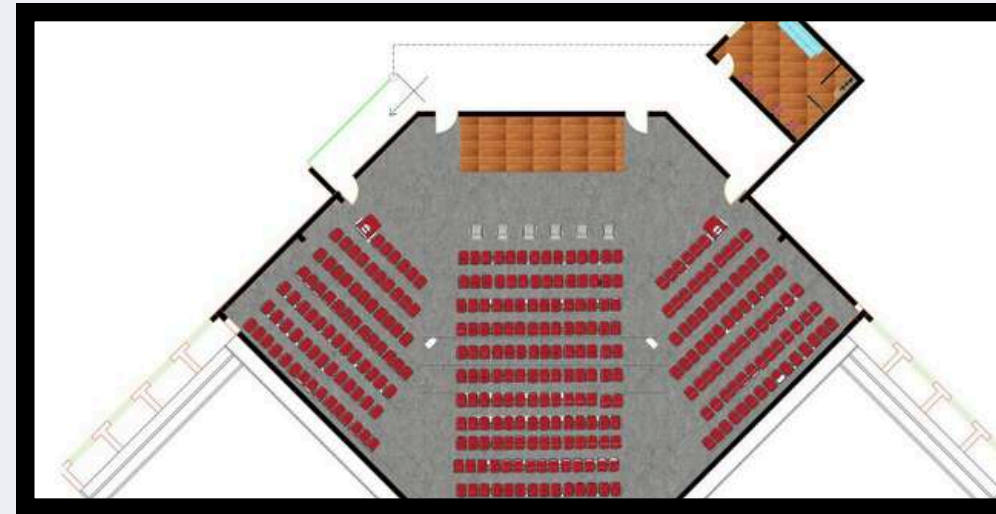

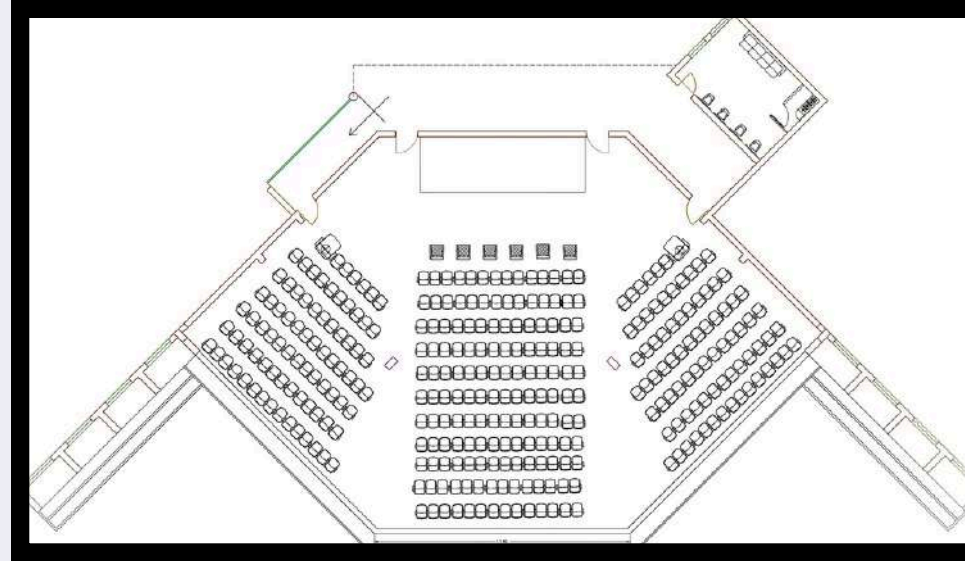

HOSPITAL

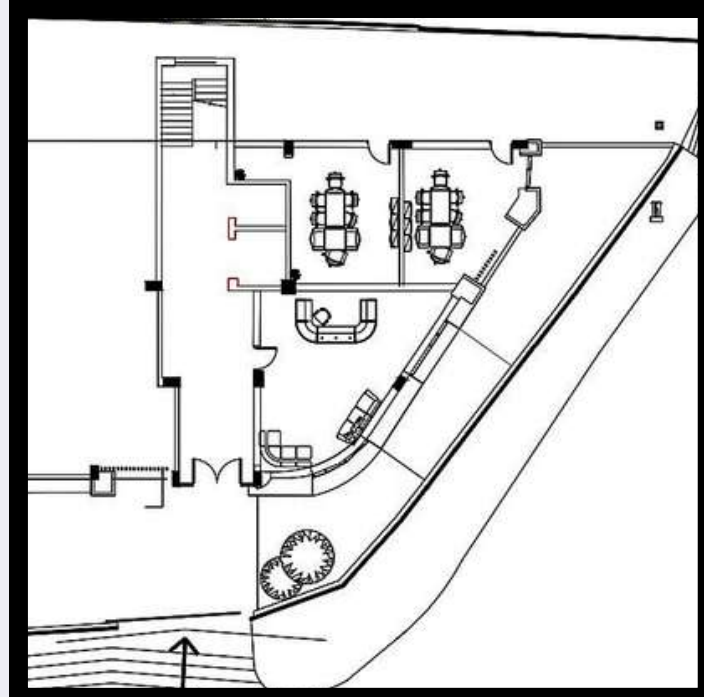

- The design focuses on functionality, hygiene, and comfort, with a layout that supports smooth movement between departments.
- Soft, soothing colors and natural materials are used to reduce stress and promote healing. Special attention is given to proper lighting, ventilation, and space planning.
- Waiting areas are designed to be welcoming, while staff zones are efficient and well-organized.
- The use of easy-to-clean surfaces and sustainable materials helps maintain hygiene and supports long-term maintenance.

AUDITORIUM

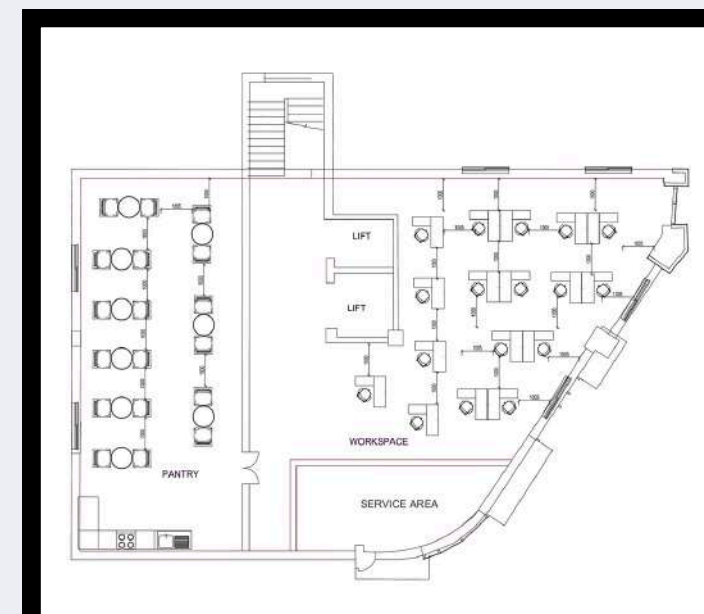

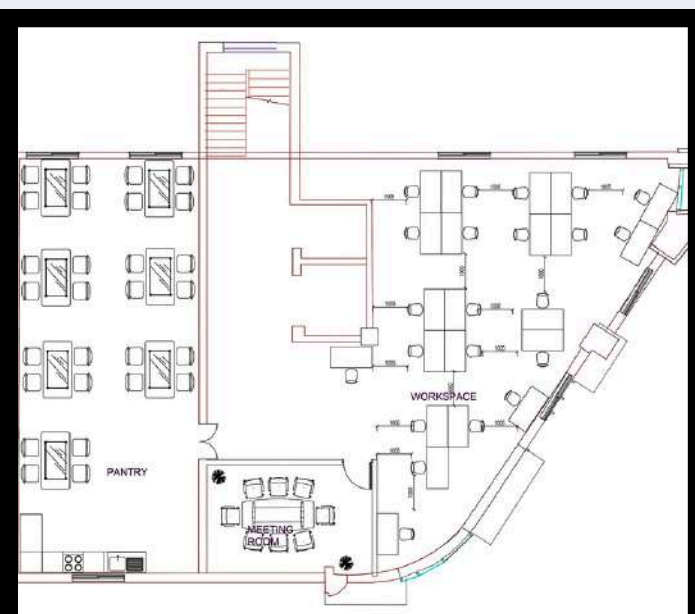

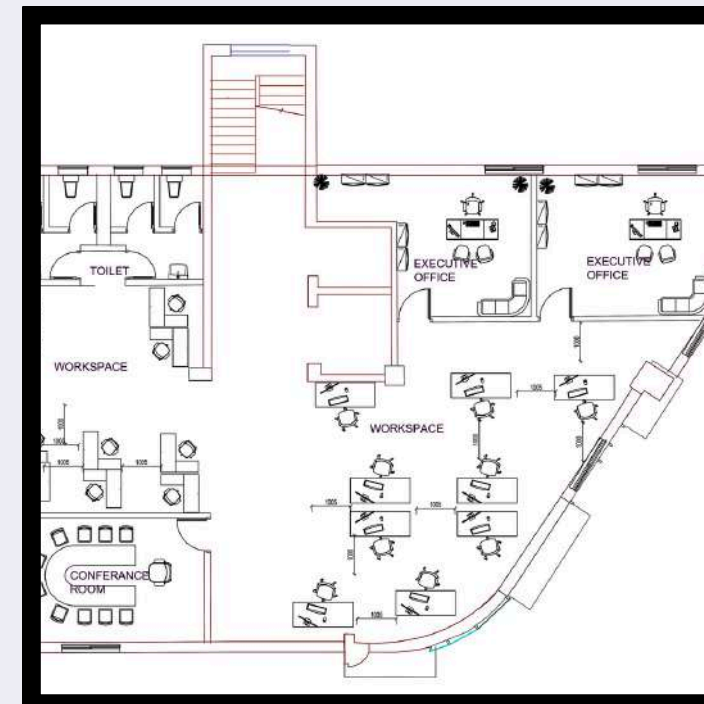

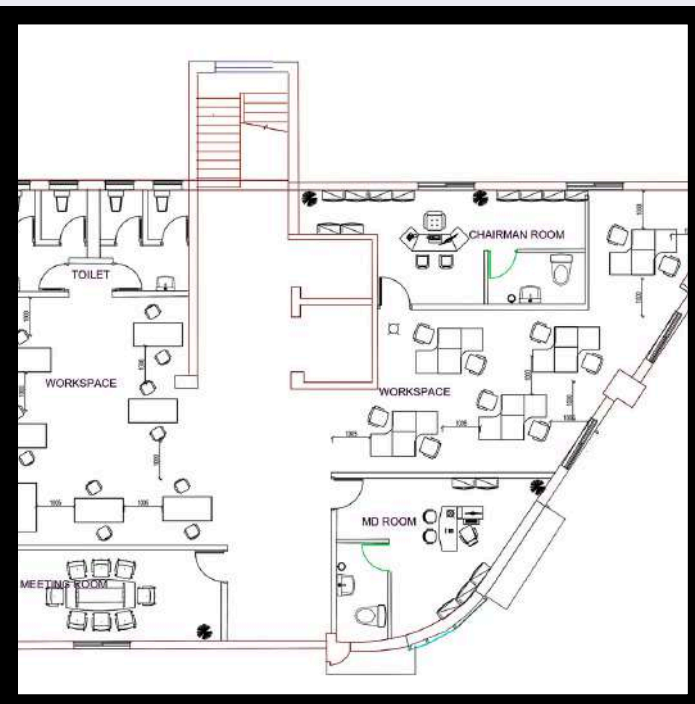

- The auditorium interior project is designed to create a comfortable and acoustically efficient space for large gatherings, performances, and presentations.
- The design concept focuses on a modern and functional layout that ensures clear visibility and sound from every seat. The seating is arranged in a tiered or sloped manner to improve sightlines toward the stage.
- Acoustic panels, sound-absorbing materials, and proper ceiling design are used to enhance sound quality. The color palette is kept elegant and calm to maintain focus on the stage.
- Lighting is carefully planned with a combination of general, stage, and spotlighting to suit various events.

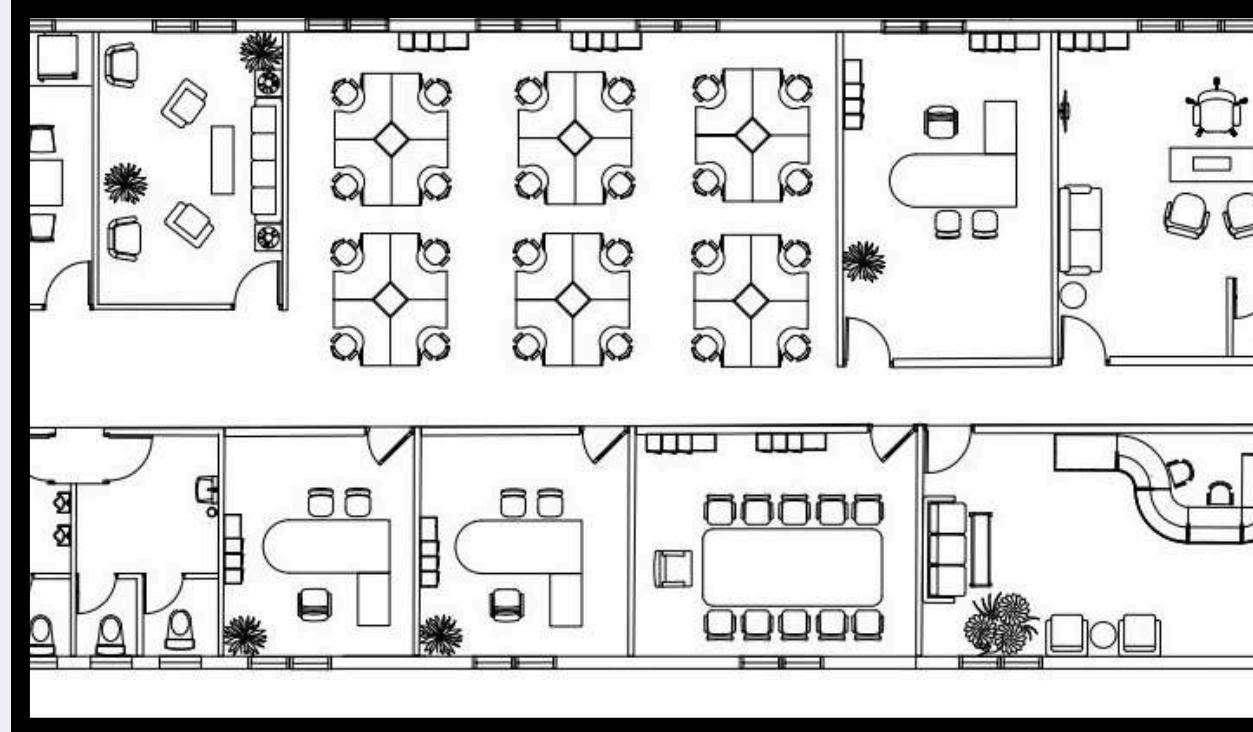

CORPORATE OFFICE

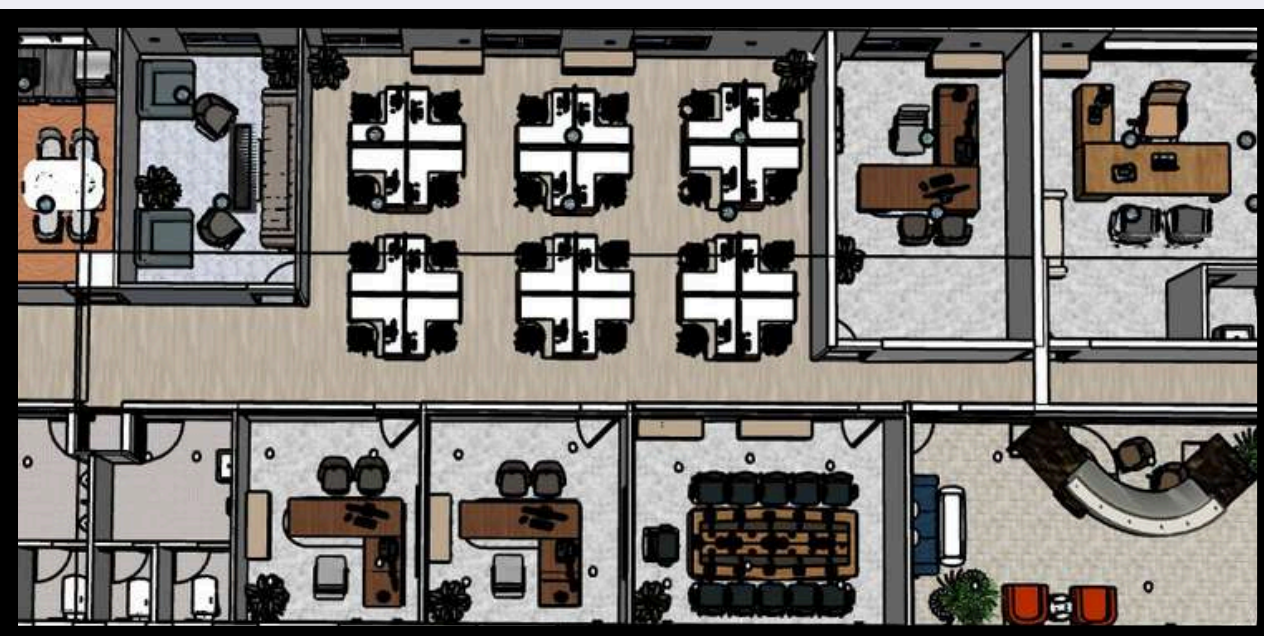

- The design concept focuses on clean lines, modern materials, and a sophisticated color palette to reflect the company's identity and culture.
- The layout includes a reception area, workstations, executive cabins, meeting rooms, and informal collaboration spaces, promoting both focused work and teamwork.
- Materials like glass, metal, and wood are used to create a sleek and durable environment.

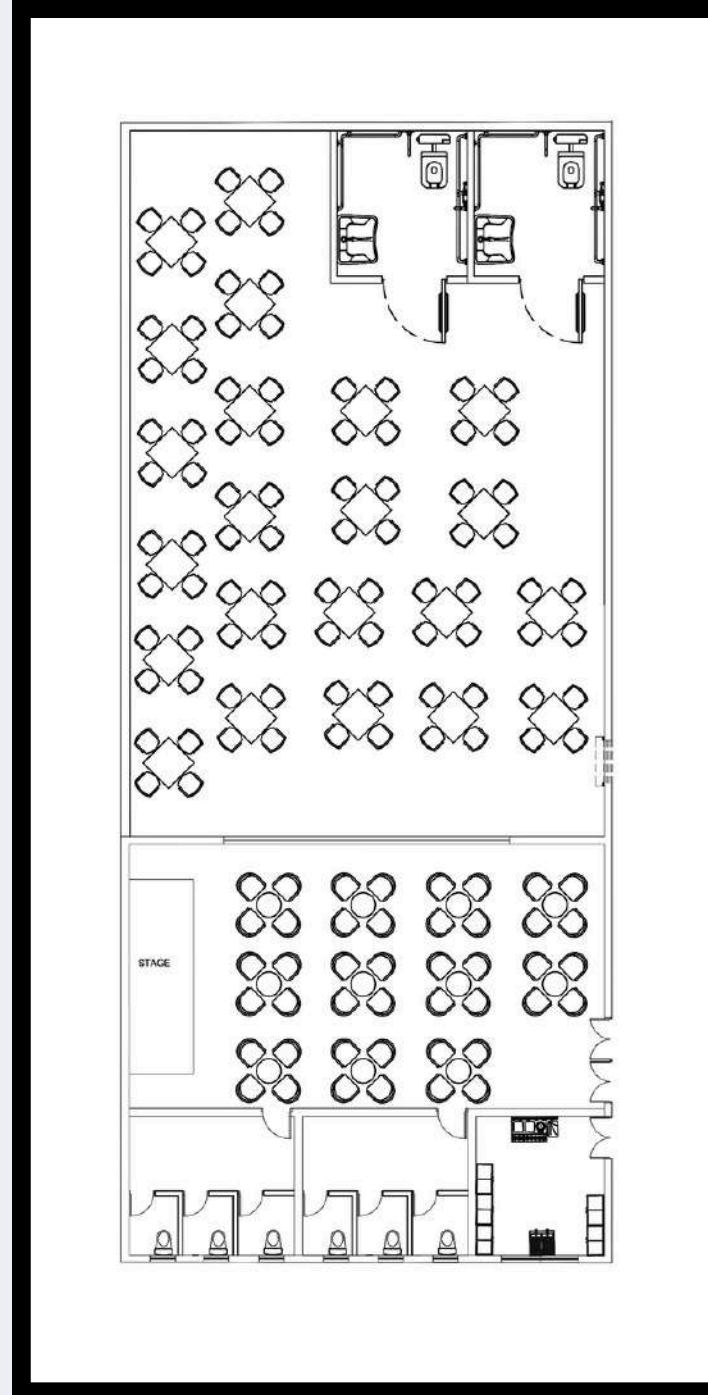

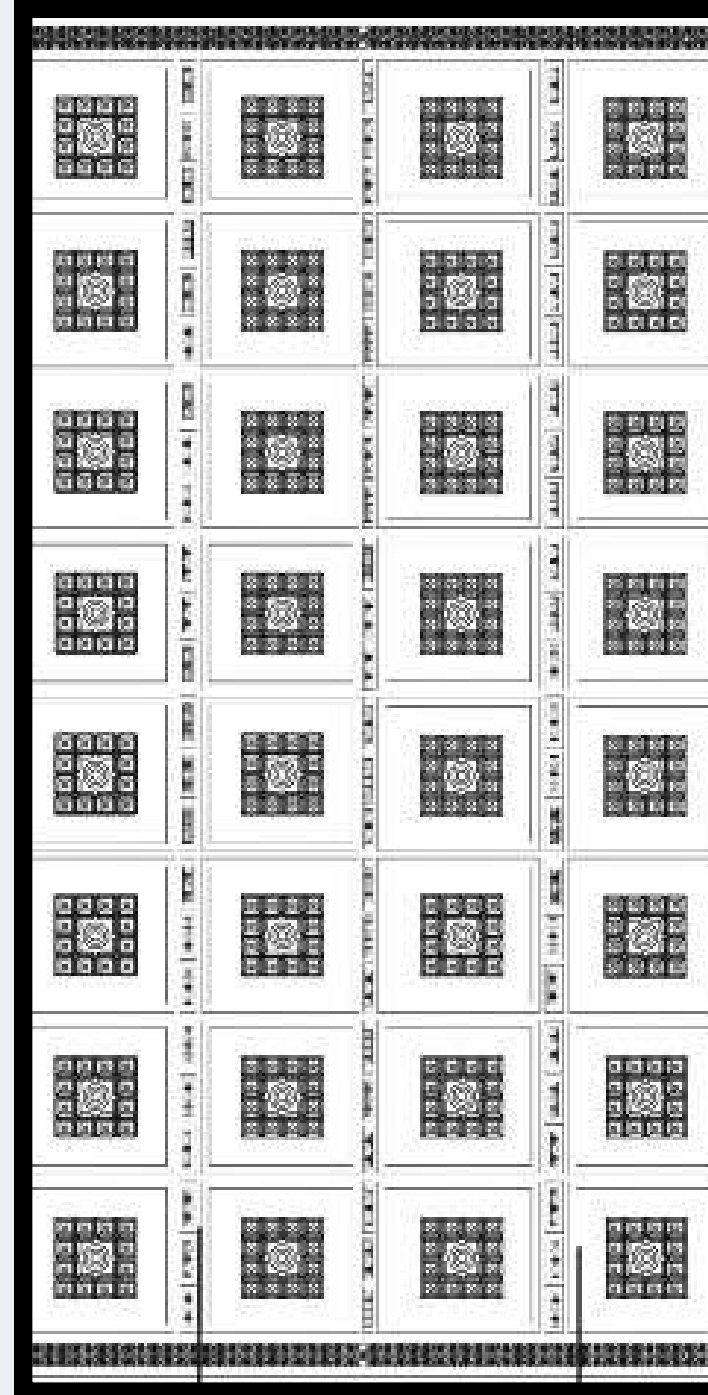

INTERIOR OFFICE

- The office interior project focuses on creating a modern, functional, and comfortable workspace that improves productivity and supports collaboration.
- The design is based on a clean, minimalist concept with a professional yet welcoming atmosphere.
- The space planning includes open work areas, private cabins, meeting rooms, a reception, and breakout zones to balance privacy and teamwork.

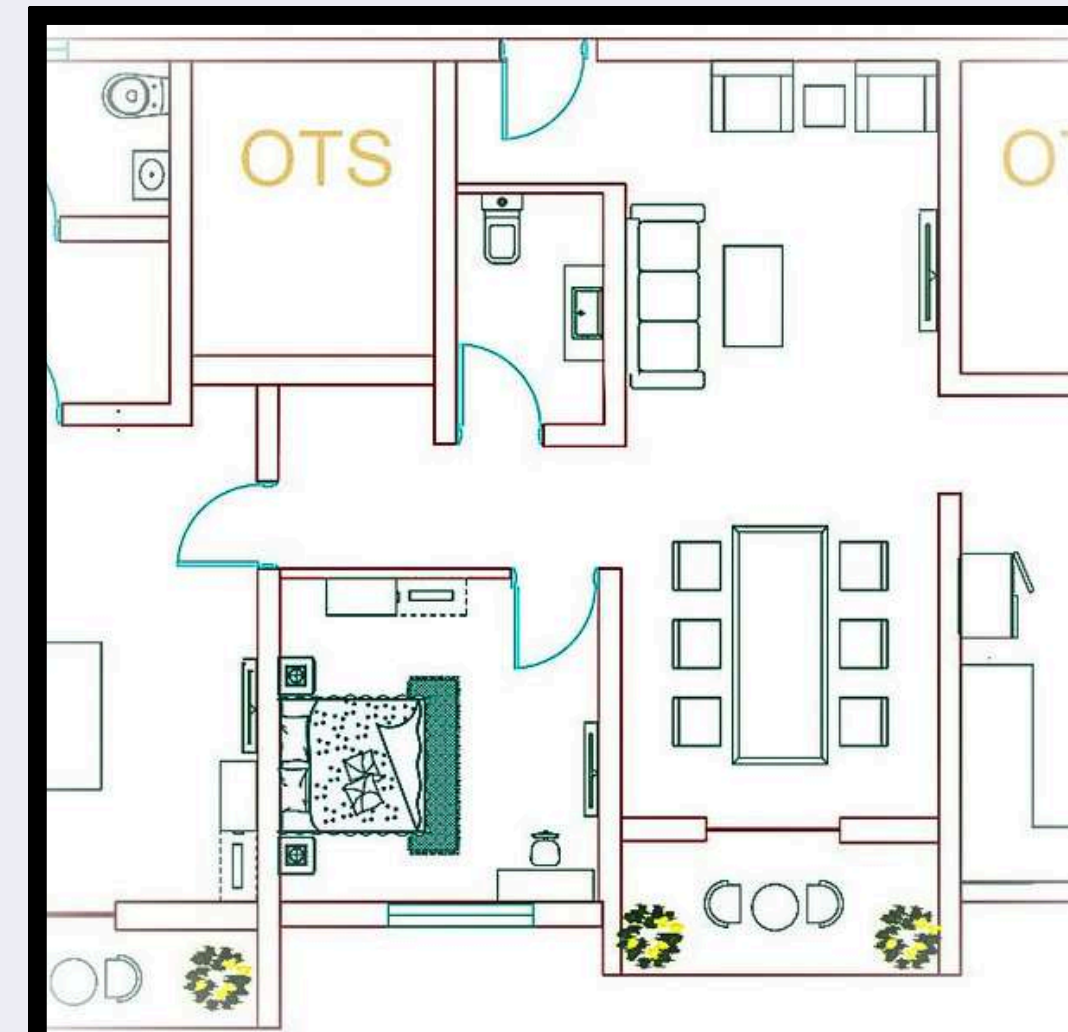

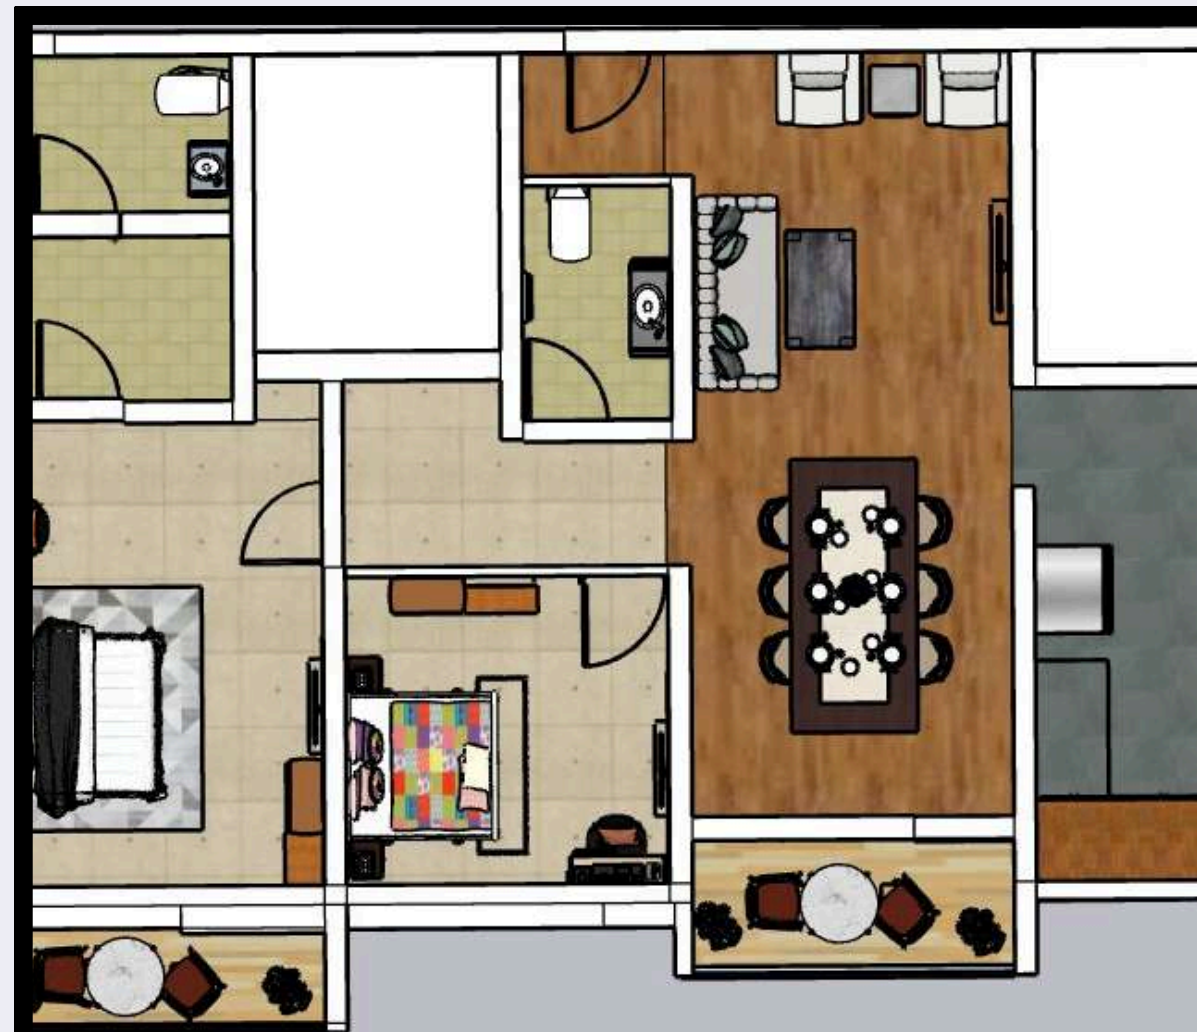

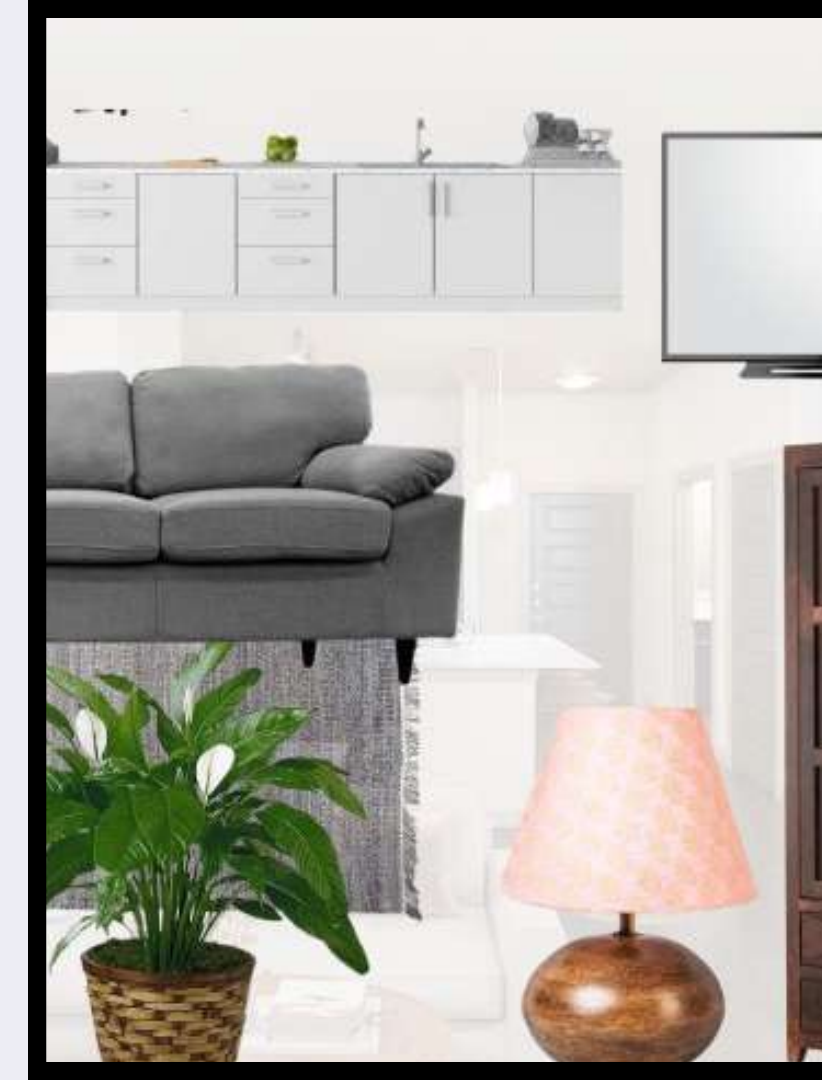

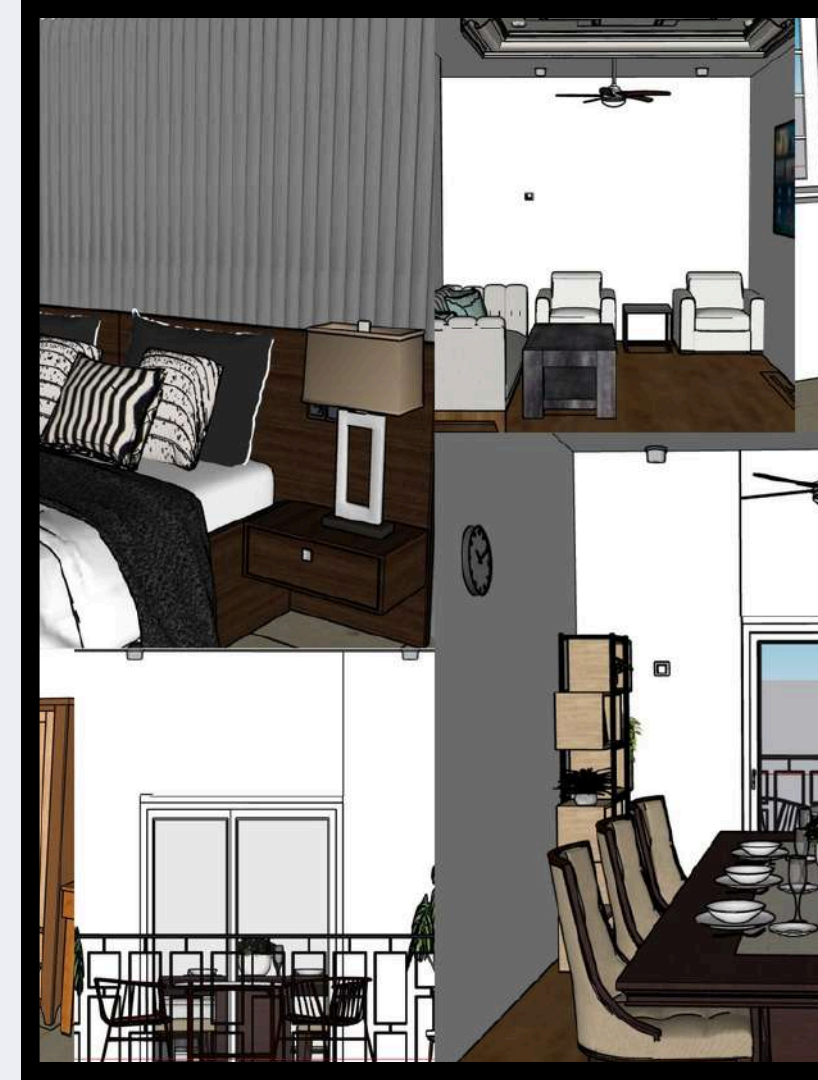

BANQUET HALL

- The banquet hall project is designed to be a beautiful and flexible space for events like weddings and parties.
- The style is modern with a touch of luxury, making it both stylish and comfortable.
- The layout is planned to include seating areas, a stage, and space for food service, making it easy for people to move around.
- Materials like wood, soft fabrics, and stone are used to make the hall look nice and last long.
- Lighting is planned to create a warm and welcoming feeling, using different types of lights. The furniture is easy to move and arrange for different events.

APARTMENT

- This project focuses on designing a modern and functional apartment space that balances aesthetics with practicality.
- The concept was to create a warm and welcoming environment using neutral tones, open layouts, and comfortable furnishings.
- The design process included detailed space planning, 3D modeling, and interior visualization to ensure maximum efficiency and comfort.
- The project helped me understand the importance of zoning, material selection, and creating a homely atmosphere in residential interiors.

COOKSCAPE

- The Cookscape interior is designed to showcase modern, functional, and stylish modular kitchen setups that appeal to a wide range of customers.
- The space is arranged to display various kitchen layouts like L-shaped, U-shaped, and island kitchens, each with different finishes, colors, and storage solutions.
- The design uses sleek materials like acrylic, laminate, glass, and wood to highlight both aesthetics and practicality.

- Lighting is focused and layered to enhance the display of textures and surfaces, while open circulation allows customers to walk through and experience each kitchen module. Smart storage, modern appliances, and space-saving ideas are emphasized to demonstrate efficiency. The overall ambience is clean, organized, and inviting, reflecting Cookscape's brand identity as a leader in modular kitchen solutions.

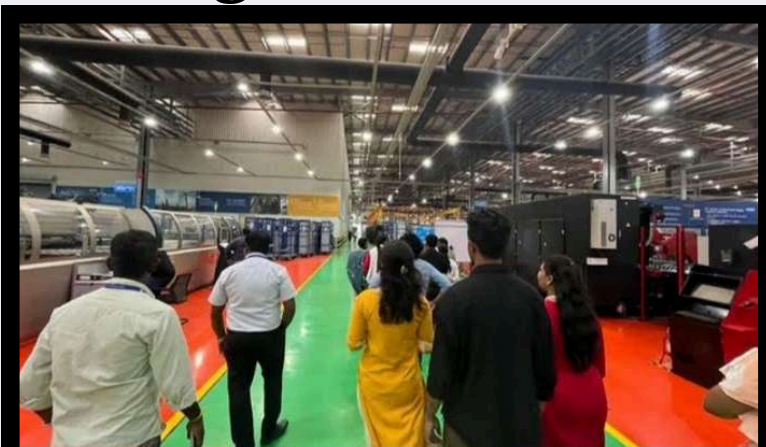

KONE FACTORY

- KONE factory focuses on functionality, safety, and efficient workflow to support the production of elevators, escalators. The layout is planned for smooth movement of materials, machinery, and workers, with clearly marked zones for manufacturing, assembly, testing, and storage.

- Ventilation and noise control are carefully managed to create a healthy working environment. Office and control areas within the factory are kept minimal, with ergonomic furniture and large viewing windows to oversee factory operations.

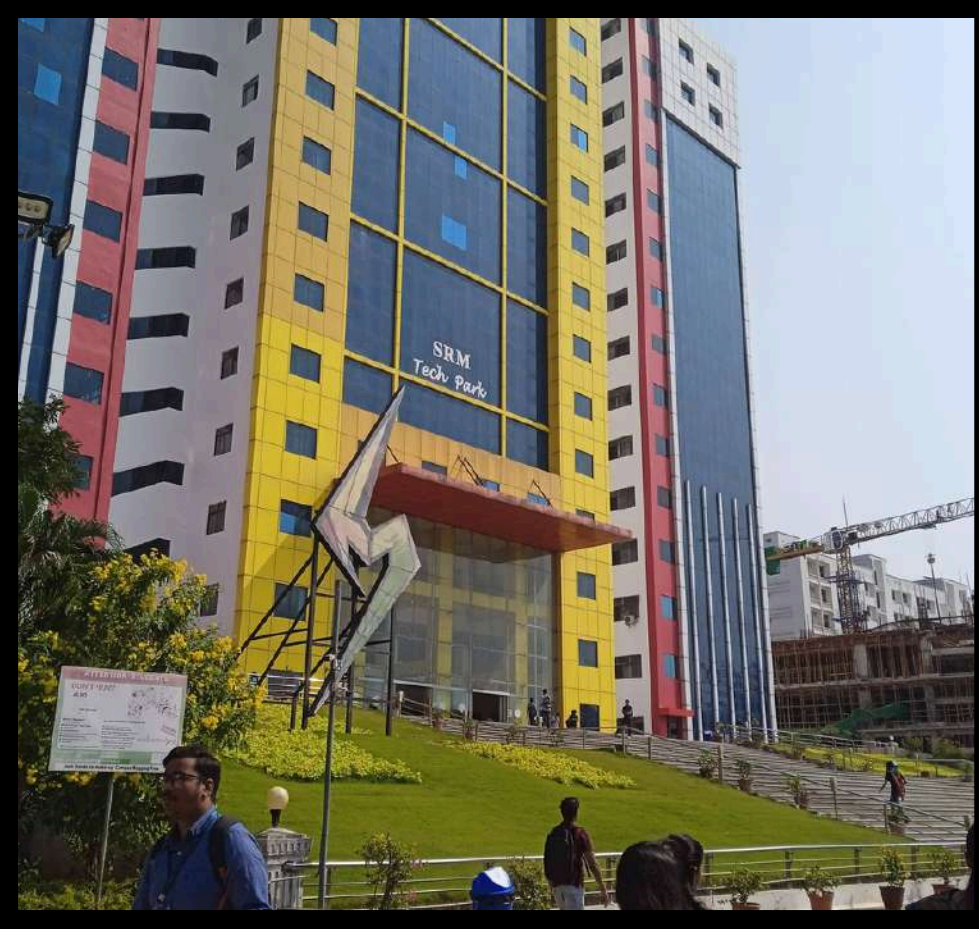

- Lighting is bright and evenly distributed to maintain high visibility and worker safety.

DESIGN REFLECTION

- Design" is a broad concept that refers to the process of imagining, planning, and creating something with a specific purpose or function in mind. It combines creativity, functionality, and aesthetics to solve problems or communicate ideas.

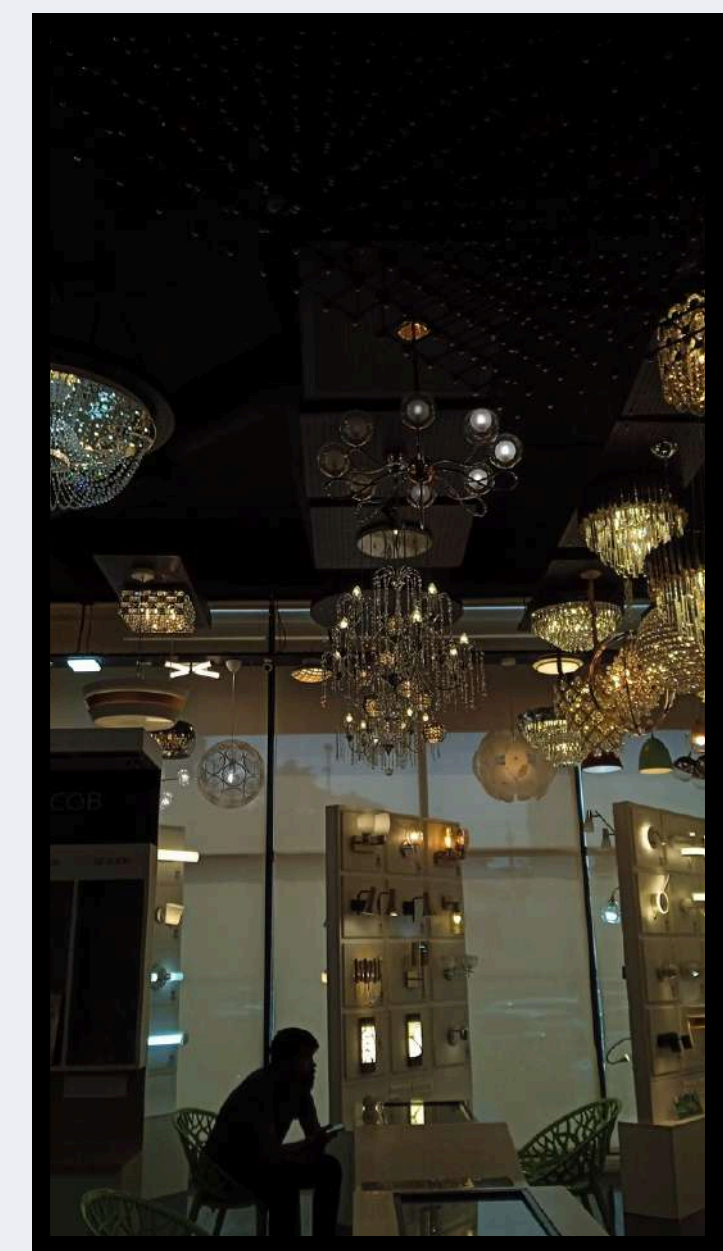

- Purpose of Design:
- Solve a problem
- Improve usability
- Communicate message
- Enhance aesthetics
- Influence behavior

- The design debate typically revolves around various perspectives on what design is, its role, and how it should be approached. This debate often involves differing views on the purpose of design, its influence on society, and its relationship with art, technology, and functionality.

PHILIPS

- The design follows a clean, modern, and minimal aesthetic with a focus on technology integration and user experience. The space is divided into interactive zones to showcase products such as smart lighting, medical devices, and home appliances. Bright, well-distributed lighting—often using Philips' own products—highlights key displays and creates a dynamic atmosphere. Materials like glass, metal, and soft textures are used to balance a tech-forward look with comfort.

- Neutral colors with blue accents reflect the brand palette, while digital screens and interactive panels enhance customer engagement. The layout promotes smooth circulation, with seating areas and demo zones to encourage hands-on experience. Overall, the interior supports innovation, clarity, and customer connection.

PLYWOOD FACTORY

- The interior of the plywood factory is designed for maximum efficiency, safety, and durability to support large-scale manufacturing processes.

- The layout is carefully organized into zones for raw material storage, processing, pressing, cutting, finishing, and packaging. Wide pathways and clear markings ensure smooth movement of materials and machinery.

- High ceilings and proper ventilation systems help control dust and maintain air quality. Bright, uniform lighting is used throughout the factory to improve visibility and reduce accidents. Utility areas like control rooms and staff zones are designed with ergonomic furniture and sound insulation to ensure comfort in a noisy environment.

WRITERS CAFE

The design blends cozy, rustic elements with modern touches, using warm lighting, wooden furniture, and soft furnishings to create a homely atmosphere.

Seating includes a mix of individual desks, reading nooks, and shared tables to suit both solo work and casual conversations. Bookshelves, artwork, and handwritten quotes decorate the walls, adding personality and inspiration.
